The cost-share is based on the gross annual income of the older person(s) income defined as a percentage of FPG and their total budget amount. In the case of caregiver services where the caregiver and the care receiver live together and one is 60 years and older use the two person household income and apply to the two person household column on the sliding scale. Income does not include any assets, savings or other property owned by older person. No verification of income shall be required. Services shall be provided regardless of the individual's ability or willingness to pay their cost share.
